NETCHEMISTRY HAS SUCCESSFULLY COMPLETED THE CYBERTRUST SITESECURE CERTIFICATION

NEWPORT BEACH, Calif., May 22, 2006 - NetChemistry, a top-tier provider of mission-critical, highly secure software to the Healthcare and Financial Services Sector, today announced successful achievement of Cybertrust SiteSecure Certification for their Newport Beach, California location. This certification reflects your organization's compliance with an extensive and continuous security assurance process, and validates the presence of risk reduction practices at the location mentioned above.

As a SiteSecure Certified customer, NetChemistry has had its security controls, policies, and procedures examined, measured, and verified against a set of Essential Practices as defined by Cybertrust, Inc. These Essential Practices are embodied in Cybertrust's unique life-cycle process that is comprised of three phases of risk assessment. Working with Cybertrust, NetChemistry 1) identified critical systems and assets; assessed the risk of these systems, and committed appropriate resources to improve them; 2) complied with relevant Essential Practices designed to protect NetChemistry's systems and networks, and 3) through Cybertrust's on-going monitoring process, will be assured of continued information security and risk reduction efforts as new threats are identified or encountered.

Evaluation procedures under the SiteSecure security assurance program included external perimeter scanning of your critical devices; verification of the security of your physical environment, including your perimeter physical defenses, and an assessment of your desktops. These assessments will be repeated periodically throughout our engagement with NetChemistry, to ensure continued compliance with the SiteSecure program.

About NetChemistry
NetChemistry is an Internet solution and software provider for the Financial and Health Services industry whose systems have handled billions of dollars in transactions. Combining vertical expertise with their Core Product Suite, NetChemistry specializes in Web-based information enrollment, distribution and tracking systems comprised of secure, scalable software modules that can be rapidly customized to fit the different parameters of each clients offering. The modules are designed to improve customer relationships resulting in efficiency, convenience and reduced liability.

In addition to software development, NetChemistry has a comprehensive understanding of design architecture, systems integration and provides a complete hosting solution at the tier one SBC facility in Southern California.
